IMPORTANT INFORMATION

The capital value of shares in HIT and the income distributed may fluctuate in accordance with the underlying performance of the shares and securities in which the Trust invests. In addition, as the shares in HIT are traded on a stock market, the share price will fluctuate in accordance with supply and demand and may not reflect the underlying net asset value of the shares; where the share price is less than the underlying value of the assets, the difference is known as the 'discount'. For these reasons, investors may not get back the original amount invested.

HIT may borrow money in order to make further investments. This is known as 'gearing' and can enhance shareholder returns in rising markets but, conversely, can reduce them in falling markets.

This factsheet has been issued and approved by Herald Investment Management Ltd, which is authorised and regulated by the Financial Services Authority.
